

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1. (currently amended): A method of performing a telecommunication, in a telecommunication system, between a caller terminal and a callee terminal identified by an identification code, said method comprising:
 - initiating an operation of collecting real-time routing information, from the telecommunication system, related to the identification code of the callee terminal, after entering said identification code at the caller's terminal and before one of activating the telecommunication and establishing a telecommunication link;
 - displaying at least a part of said collected real-time routing information at the caller terminal; and
 - one of activating the telecommunication in order to establish the telecommunication link corresponding to the entered identification code and cancelling a current attempt to establish the telecommunication link based on said dialed identification code.
2. (previously presented): The method according to claim 1, wherein a concerned dialed telecommunication is activated by a further action performed on said caller terminal.
3. (previously presented): The method according to claim 2, wherein the concerned dialed telecommunication is activated by further pressing a determined key on the caller terminal.

4. (previously presented): The method according to claim 1, wherein a concerned dialed telecommunication is automatically activated after a predetermined time following a dialing.

5. (previously presented): The method according to claim 1, wherein the concerned dialed telecommunication is automatically cancelled in the absence of any further action performed on said caller terminal during a predetermined time after dialing.

6. (previously presented): The method according to claim 1, wherein the information displayed at the caller terminal only comprises information related to the callee terminal.

7. (previously presented): The method according to claim 1, wherein the information displayed at the caller terminal comprises at least one of identification of all the terminal(s) and other intermediate telecommunication device(s) which would be involved in the telecommunication link if a dialed telecommunication is activated, and their respective status and their mutual connections and relationships.

8. (previously presented): Telecommunication terminal comprising a visual and/or audio display means and adapted to perform the method according to claim 1.

9. (previously presented): Telecommunication system able to link together a plurality of telecommunication terminals according to claim 8, comprising one telecommunication network adapted for connection with one or several other telecommunication network(s), and managed by a corresponding network controller, wherein said telecommunication system is further adapted to perform the method according to claim 1.

10. (previously presented): The method according to claim 6, wherein said information related to the callee terminal comprises at least one of identification information of another end

terminal which would be involved in establishing the telecommunication link and a person to whom said another end terminal belongs.

11. (currently amended): The method according to claim 1, wherein said real-time routing information is collected in real-time.

12. (currently amended): The method according to claim 1, wherein said real-time routing information related to the identification code of the callee terminal is not previously stored.
